

Netilion, IIoT ecosystem

From sensors to digital services

Key facts

- Netilion, Endress+Hauser's IIoT ecosystem allows intelligent and networked applications to be realized around the Industrial Internet of Things
- We currently have three Netilion Services available with Analytics, Health and Library as well as two Netilion Smart Systems with Surface Water and Aquaculture
- Data security is ensured by using the most modern standards and through audition by independent third-party certification bodies

Create your Netilion account and start with the service of your choice

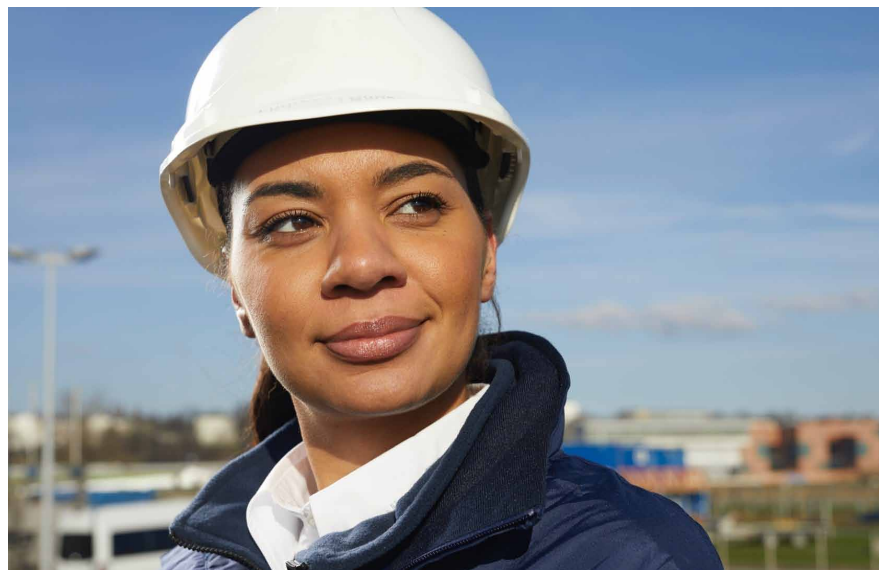

Our services are straightforward and easy to put into operation. Complicated implementation projects are definitively a thing of the past. Sign up for free now.

More details on Netilion?

netilion.endress.com

Would you like your production facility to be carefree and more enjoyable to operate? To achieve this, we think differently and are therefore able to offer you completely new products and services for your success.

You can use our services immediately, at any time and from anywhere. And you will have fun using them. We create digital services using the most modern and secure Internet technologies. We combine them with the technologies of industrial production facilities.

All our Netilion services are easy and straightforward to put into operation – complicated implementation projects are a thing of the past.

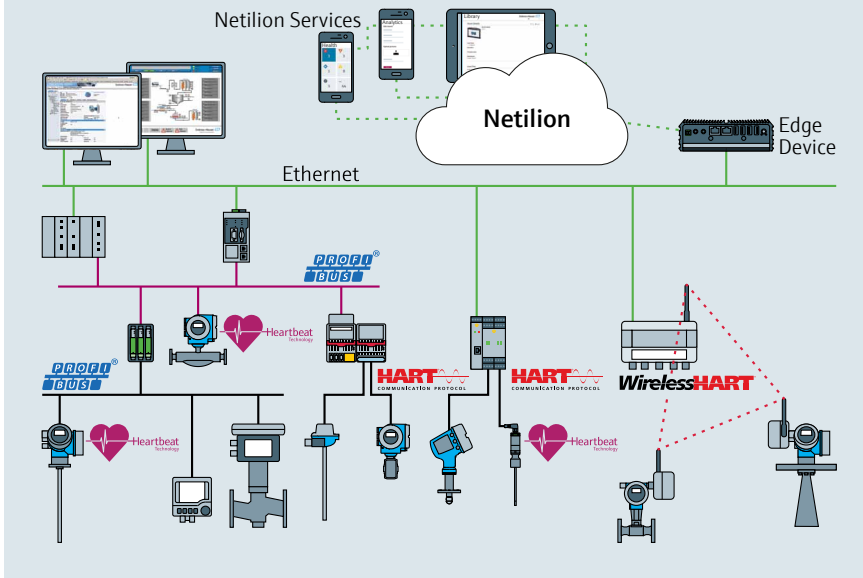

Netilion Services:

Netilion Analytics provides you with an inventory of your production facility within a few minutes and thus gives you complete transparency. Based on the inventory, current optimization suggestions for your production plant are calculated for you at any time.

Netilion Health lets the assets in your production plant speak for themselves, so that you know immediately, at any time and from anywhere how your production facility is doing. If the assets aren't doing so well, you'll know the reason and what remedies there are.

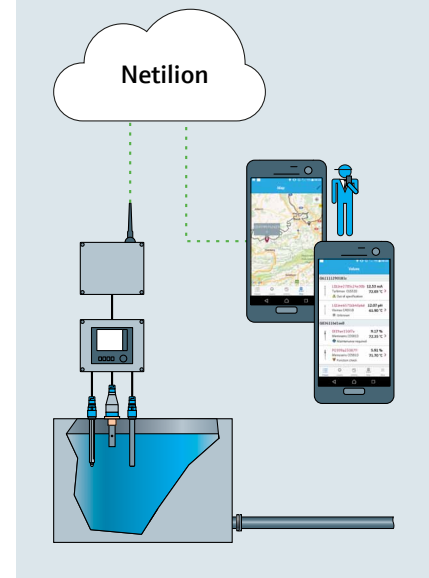

Netilion Library makes the collective knowledge of your production facility available to all your employees immediately, at any time and from anywhere. You save valuable search time and archiving work.

Our Edge Device and Gateways in action in industrial network topologies

Netilion Smart Systems

Smart and easy monitoring with Netilion Smart Systems

Netilion Smart Systems are easy-to-use complete packages consisting of measurement technology, communication solutions and mobile apps. Two variants are currently available:

Aquaculture: The water quality in aquacultures massively influences fish health. Check your water to ensure a healthy stock.

Surface Water: Quality of surface water in lakes and rivers has a major impact on environmental conditions and human health.

Netilion Projects fill the gap! With our current Netilion offering we haven't stopped developing. We continuously strive to ease your business life. However, you may have specific requirements and needs which are not completely covered from our existing offering. Contact us and our projects team will be delighted to support you in your success!

Data security is an important requirement in a world where networking is rapidly spreading into all areas of life. On one hand data exchange between companies is on the increase, but on the other protecting intellectual property remains an important goal.

In order to ensure maximum data security, Endress+Hauser uses the most modern safety mechanisms.

- Use of state of the art encryption methods (HTTPS / TLS with SHA-256)
- Co-operation with certified data centers (e.g. ISO 27001) according to European law
- European server locations and a privacy policy according best practice guarantee a high level of data privacy
- Certification of the Endress+Hauser platform by the independent certification authority, licensed by "EuroCloud"

Eco-friendly produced and printed on paper from sustainable forestry.
